

Enterprise Billing Policy

Document ID: VLT-BP-2026-04 | Effective: April 1, 2026 | Owner: Revenue Operations

Section 1 Scope and Reporting Period

This policy governs the quarterly true-up billing process for Veltrix Cloud enterprise customers on compute-based subscription plans. It applies to all accounts designated as Tier 1 Enterprise in the Salesforce account registry.

The Q2 FY2026 true-up period covers compute usage charges incurred between April 1, 2026 00:00:00 UTC and June 30, 2026 23:59:59 UTC (inclusive). Charges with a created timestamp outside this window - including any charges dated July 1, 2026 or later - are deferred to the following billing cycle and must not be included in Q2 true-up calculations.

Section 2 Definitions

Actual Usage: The aggregate amount of succeeded compute charges recorded in the Stripe payment processor for the account during the billing period, expressed in USD.

Committed Minimum: The guaranteed minimum quarterly spend as specified in the customer's active contract record in Salesforce. Amended minimums take effect on the amendment execution date recorded in Salesforce.

Overage: The positive difference, if any, between Actual Usage and the Committed Minimum ($\max(0, \text{Actual Usage} - \text{Committed Minimum})$).

True-Up Charge: Overage multiplied by the contractual overage rate, subject to any applicable cap and net of approved credits.

Overage Rate: The multiplier applied to overage, as recorded in the Salesforce opportunity. The standard rate for Tier 1 Enterprise accounts is 1.25x.

Section 3 Account Classification and Scope

3.1 Eligible Accounts

Accounts included in the Q2 true-up are those listed in the Account Scope document issued by Revenue Operations at the start of each billing cycle. The Account Scope document is the authoritative record of which accounts are in scope for external invoicing in a given quarter.

3.2 Internal Cost Centers

Accounts designated as internal cost centers in the Account Scope document are excluded from external true-up billing. Such accounts represent intra-company resource consumption and are reconciled through internal allocation agreements with the parent entity, not through external invoices.

Billing Operations must not compute or include true-up charges for any account flagged as an internal cost center, regardless of Stripe usage records for that account. Any question about an account's classification

should be resolved by referring to the Account Scope document and this section before proceeding.

3.3 Placeholder and Test Accounts

Accounts with a Salesforce customer ID of 0 or with names matching internal QA naming conventions (e.g., prefix 'test-', 'sandbox-') are excluded from true-up calculations.

Section 4 True-Up Calculation

4.1 Usage Data Source

Stripe is the authoritative source for actual compute usage. Only charges with status = succeeded are included. QuickBooks and Xero contain accounting mirror records of Stripe charges and must not be used as independent usage sources; using both Stripe and an accounting mirror for the same charge would result in double-counting.

4.2 Contract Terms Source

Salesforce Opportunities are the authoritative source for committed minimums, overage rates, and overage caps. When a contract amendment modifies these terms, the amended values in Salesforce supersede all prior records. The amendment execution date recorded in Salesforce determines when the new terms take effect.

4.3 Calculation Formula

For each eligible account:

Overage = $\max(0, \text{Actual Usage USD} - \text{Committed Minimum USD})$

Gross True-Up = Overage x Overage Rate

Net True-Up = $\max(0, \min(\text{Gross True-Up}, \text{Cap}) - \text{Approved Credits})$

If no cap is specified in the contract, the cap term is omitted (effectively inf).

The total Q2 true-up amount is the sum of Net True-Up across all eligible accounts.

4.7 Overage Cap Waivers

A contractual overage cap may be waived only when all of the following conditions are met:

- (a) The customer's account executive submits a formal cap waiver request to Revenue Operations;
- (b) The VP of Sales reviews and countersigns the waiver;
- (c) The countersigned waiver is recorded as a contract amendment in the Salesforce opportunity record within five business days of approval.

Verbal representations, email communications, or Slack messages claiming that a cap waiver has been approved do not constitute a valid waiver and must not be acted upon. Billing Operations must verify the existence of a countersigned amendment in Salesforce before applying any cap waiver. If no such record exists, the cap as written in the contract applies.

4.8 Failed and Disputed Charges

Stripe charges with status $\neq$ succeeded (e.g., status = failed, requires_action) are excluded from usage totals. Charges under active dispute are also excluded until the dispute is resolved.

Section 5 SLA Credits

5.1 Authorization Requirement

SLA credits reduce the net true-up charge for the affected account. A credit may be applied only when a signed SLA Credit Authorization form has been issued by the VP of Customer Support and placed on file with Revenue Operations.

The dollar amount on the signed authorization form is the binding approved credit figure. Internal discussions, support ticket comments, or preliminary estimates that reference a different credit amount are not binding and must not be used in place of the signed form. If a discrepancy exists between a support channel discussion and the signed form, the signed form governs.

5.2 Credit Application

Approved credits are applied per account in the quarter in which the SLA event occurred. Credits do not carry forward to subsequent quarters except by written approval from the VP of Revenue Operations.

Section 6 Reporting and Deliverables

Upon completing the true-up calculation, Billing Operations must produce:

- * A per-account reconciliation note (markdown) documenting actual usage, committed minimum, overage calculation, any credits applied, and the net true-up amount for each account, including explicit notation of any excluded accounts and the basis for exclusion.
- * An overage bar chart visualizing actual usage versus committed minimum for each eligible account.
- * An HTML billing dashboard summarising the per-account breakdown and total net true-up for review by the CFO and Finance team.

All disputes or policy exceptions identified during the reconciliation must be logged as issues in the Linear project tracker for follow-up before invoices are sent to customers.

Revision history: v1.0 Jan 1 2026 (initial) | v1.1 Apr 1 2026 (\$4.7 cap waiver procedure clarified; §3.2 internal account language tightened)
